Main Activity

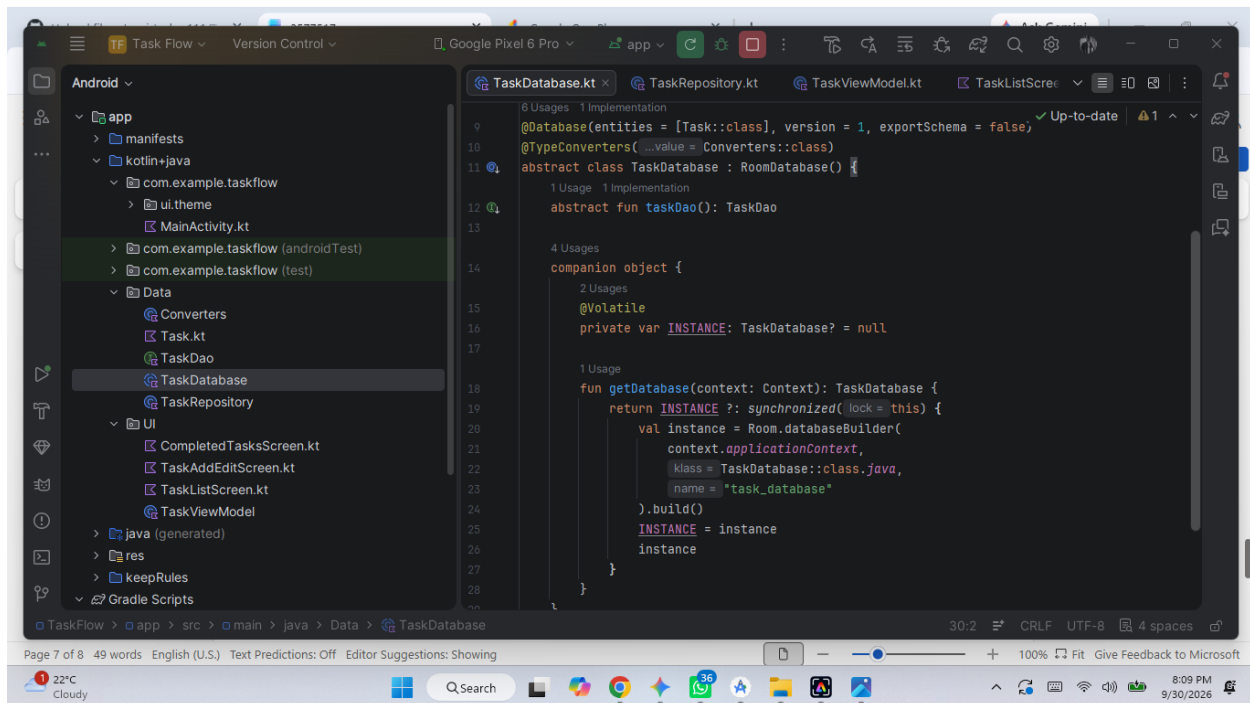

Converters to translate files into json.

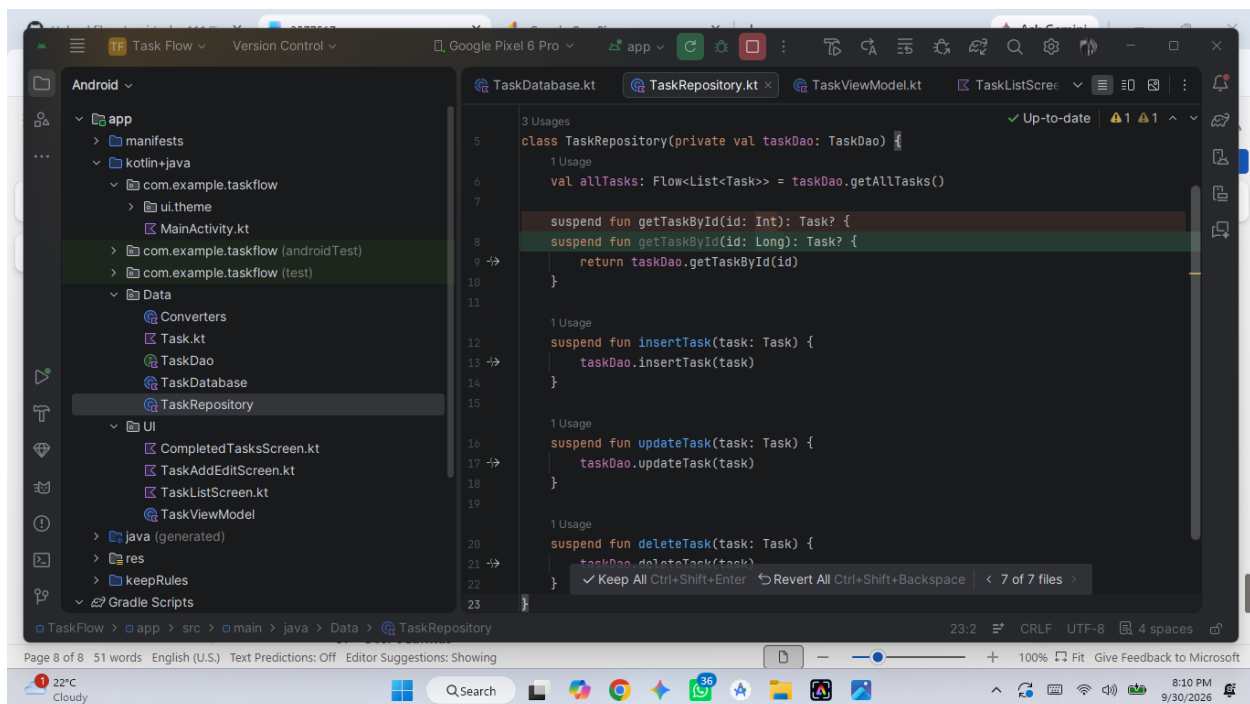

Task file

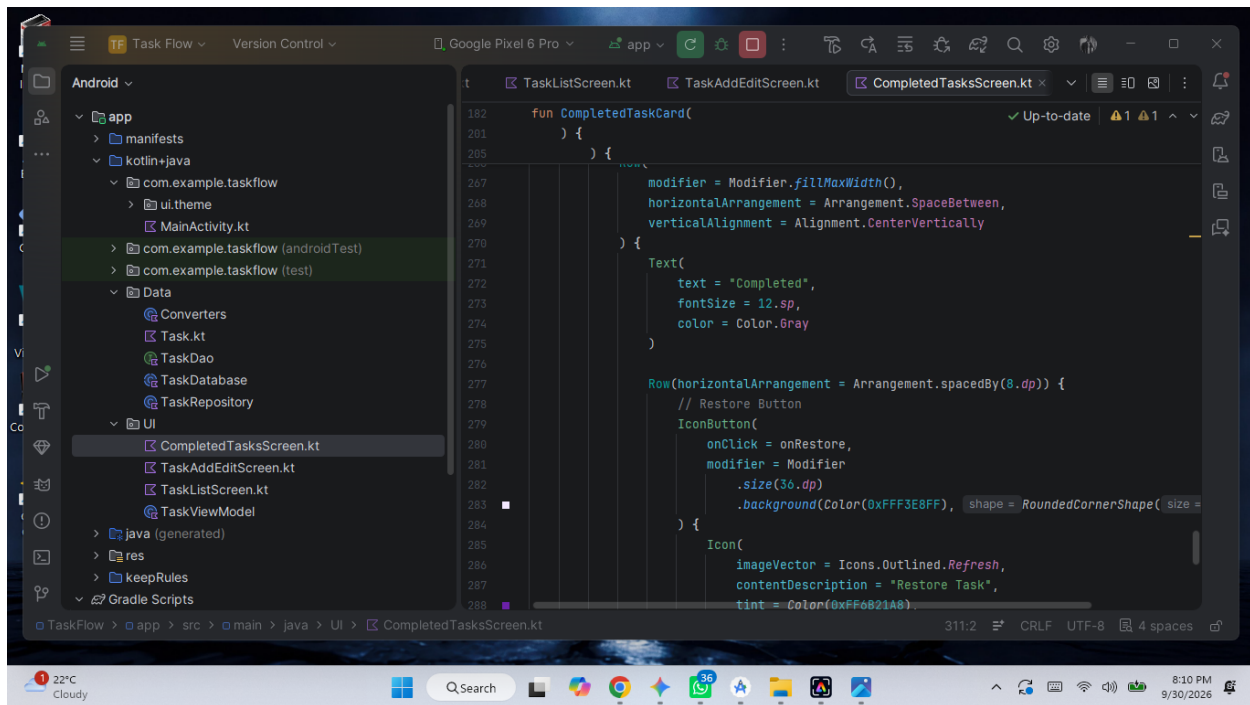

Task Dao file

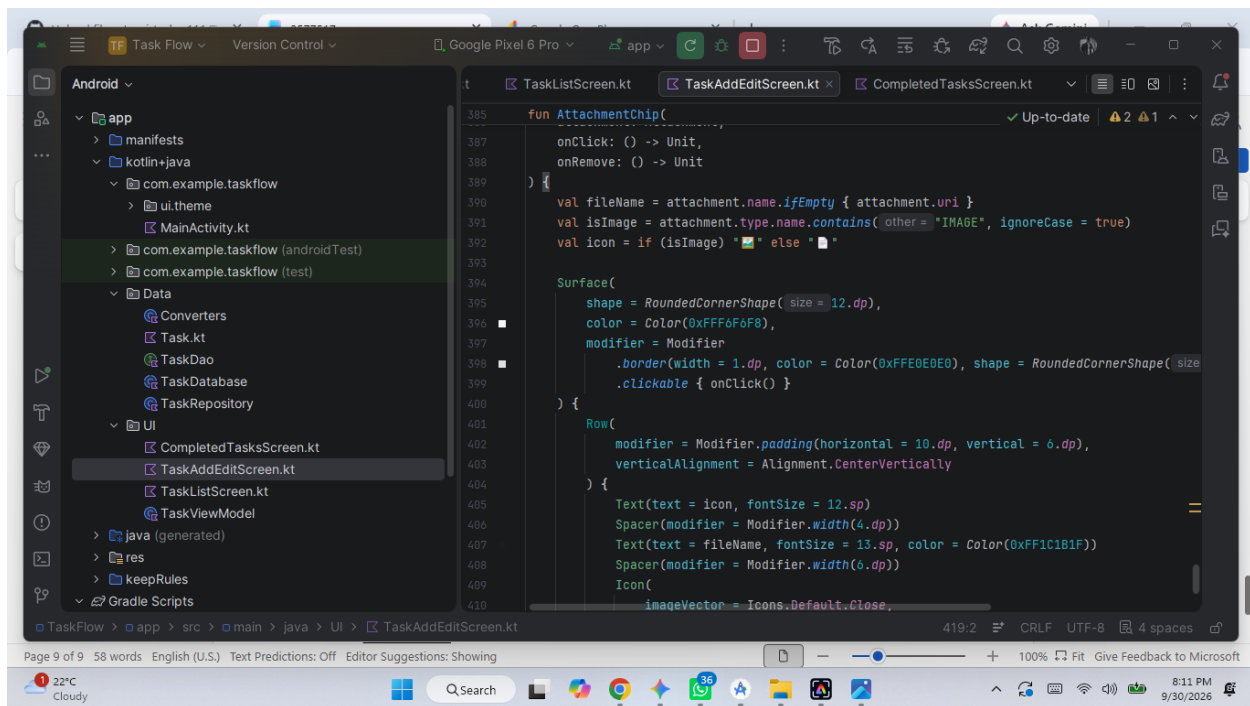

Task Database

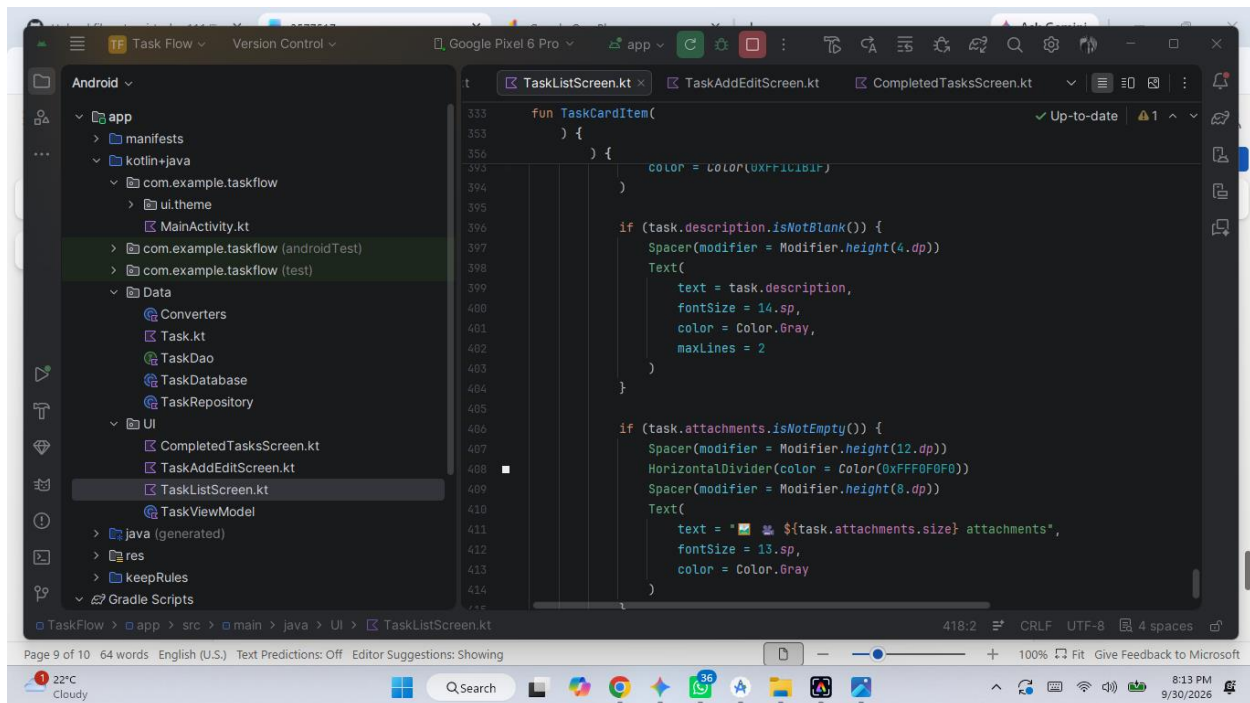

Task repo

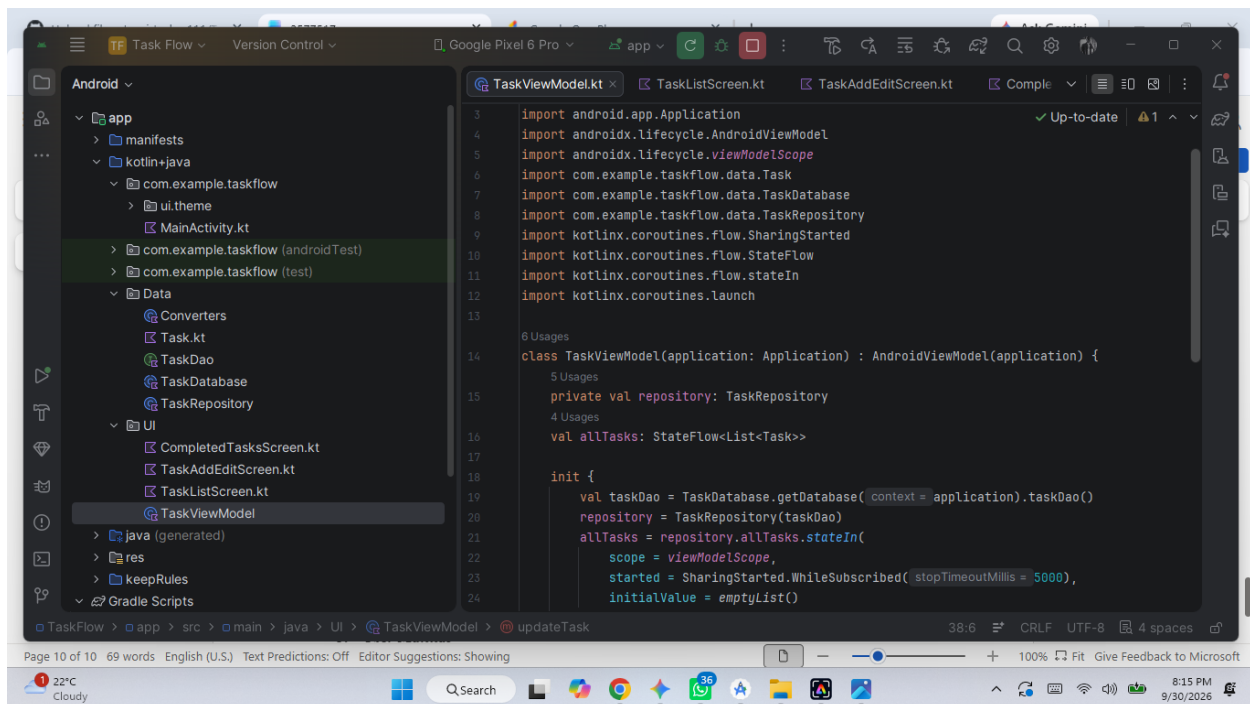

User interface design (First page)

Task edit and adding user interface

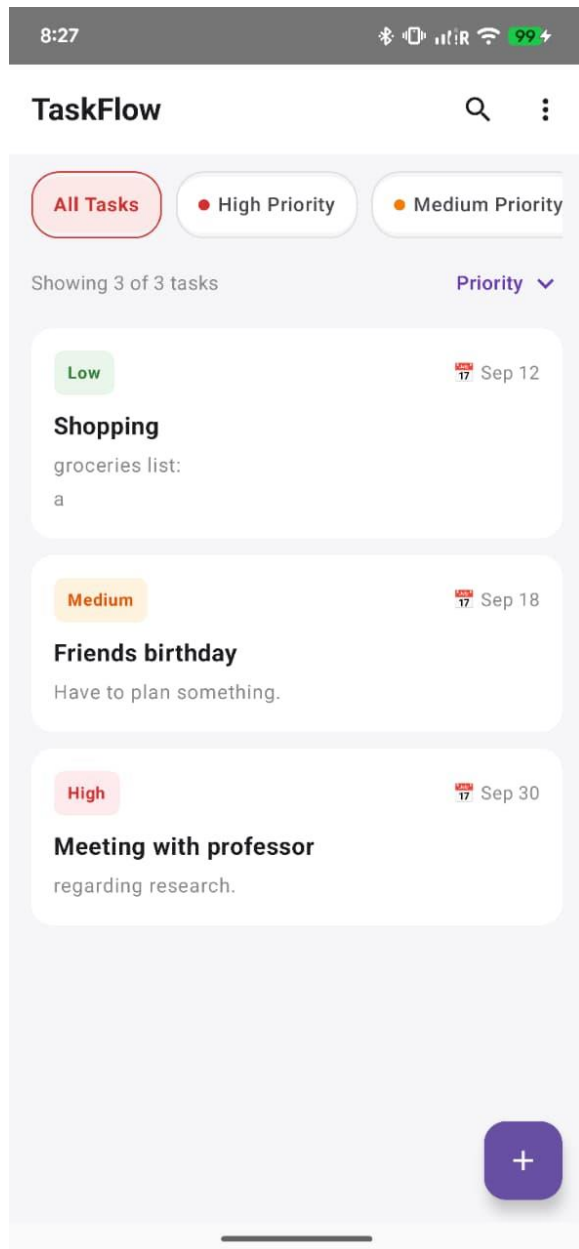

Task List screen User Interface

Task View Model

3. User Manual

This is the First page appearing right after you click on the Application. For the matter of priority, it will show high-priority tasks first. But you can choose the filters according to your preferences. Bottom right corner has the new task adding option. Top right corner has search options and already completed task option by clicking three dots.

Manage Attachments

[+ Add File](#)

No attachments added yet.

Save Changes

Right after the user clicked on floating button it will bring them to new interface for adding tasks. It has the task topic description priority level and attachment adding option too. You can manage deadline and click save changes option.

Sort Tasks By

Select one option below to arrange your layout

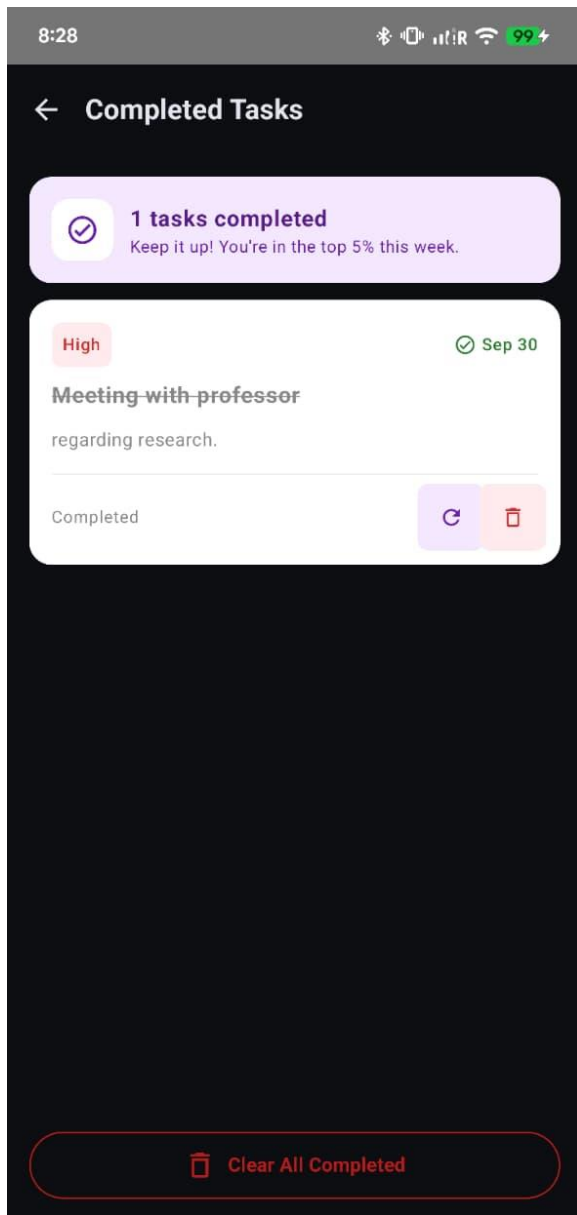

Priority (Highest First)

Due Date (Soonest First)

Task Title (A-Z)

Next in the front page you can sort tasks by following methods

This interface shows the already completed tasks. User can either revert them or delete them accordingly.
